

## SN Triple Booster Pack

**High Energy** pack to improve overall **animal performance** and **rumen function**

- ☑ Boost milk yield
- ☑ Enhance BCS in early lactation
- ☑ Improve fertility

Trusted partner to farmers since 1859

*Maximising the nutritional value  
of forage and moist feeds*

## SN Triple Booster

**High Energy** pack to improve overall **animal performance** and **rumen function**

### 1. Boosts animal **PERFORMANCE**

- \* Increases milk yield up to 5L and raises milk solids (as trials have shown)
- \* Increases fibre digestion which leads to improved butterfat level
- \* Beef Farming: Promotes extra weight gain in beef (LWG), increasing productivity per kg/dry matter intake

### 2. Provides **CONCENTRATED ENERGY SOURCE**

- \* Combats negative energy balance (NEB) in early lactation.
- \* Reduces the risk of acidosis by combining rumen buffers to improve rumen efficiency and optimising healthy rumen function
- \* At 37 ME (MJ/kg DM) the Triple Booster provides a fantastic concentrated healthy energy source

### 3. Improves **Body Condition Score (BCS)** and **BOOSTS HERD FERTILITY**

- \* Helps reduce body condition loss, particularly in early lactation
- \* The combination of C16:C18 protected fats will enhance BCS and fertility
- \* Readily available energy source to enhance fertility during NEB

“The group getting the SN Triple Booster Pack were on average **producing over 5 litres more** than their counterparts.

Cows are happy, in great condition, going in calf and filling the tank. ”

## Trial Results

“We began using **SN Triple Booster Pack** in August 2020 as part of a trial with Specialist Nutrition.

Specialist Nutrition believed that this combination pack providing energy and improving rumen function would increase overall animal performance. In particular, we were looking for a boost in milk composition and yield in an already high yielding herd and an improvement in overall herd fertility.

We trialled 15 cows on against 15 not on the **triple booster** with equal ability and age. The animals were fed using a hopper specially developed for use with the Lely Astronaut.

Initially we didn't see huge increases as my herd were already on one of the ingredients, and I had seen the first lift in yield from using this already. However, by October a significant difference was clear.

The group getting the **SN Triple Booster Pack** were on average **producing over 5 litres more** than their counterparts.

When I analyse overall herd performance, 9 of the top 10 are on the trial, and all **milking over 42ltrs while holding body condition.**

I have seen fertility improve with an **increase in conception to first service.**”

Specialist Nutrition provide all the nutritional advice I need and have a tailored plan for the herd. Cows are happy, in great condition, going in calf and filling the tank. ”

**Energy  
Boosters**

## Glucosure Energy Boost

**Glucosure is particularly suitable for high- performance dairy herds, and where there is poor utilisation of energy sources and limited feed intake.**

Used mainly in robotic milking systems it gives an energy boost at milking time plus it helps bring the cow to the robot.

Glucosure has three unique properties:

- \* Slow-release sugars
- \* Prolonged blood glucose and insulin release
- \* Sweet and palatable

The unique composition of Glucosure offers exceptional palatability and a slow-release high energy ingredient that can stimulate animals to increase their feed intake and enhance appetite.
